

Government Grievance Assessment Report

Case Identification

Grievance ID: G-20230228-001

Date of submission: on or around February 28, 2023

Nature of grievance: Complaint

Category: Water Supply

Subcategory: Garbage Dumping In Vacant Lot/Land

Reported priority: High

Detailed Assessment and Case Study

The grievance submitted by a 22-year-old resident of Ambernath, Maharashtra, India, reports a severe garbage issue in the city. The complainant has attached an image that captures a neglected outdoor area heavily littered with various types of garbage, including plastic bags, food wrappers, cardboard, and general refuse. The image also shows a nearby water body that appears to be polluted, with green vegetation on its banks and a dark, narrow body of water that is possibly a stream, canal, or drainage ditch. The scene depicts an open dumping ground with clear signs of environmental degradation. The complainant's description of the issue is brief, but the image and the location specified as Ambernath clearly indicate a problem that needs to be addressed. The grievance affects a large number of people living in the urban slum area, making it a high-priority issue for resolution. The responsible department is the Public Works Department (PWD) or Municipal Corporation of Ambernath, and the grievance requires immediate action to address the environmental degradation, health risks, and civic violations. The short-term corrective measure is to clear the garbage and restore the water body, while the long-term measure is to implement a comprehensive waste management system and educate the public about the importance of proper waste disposal. The priority level is High due to the significant impact on the environment and public health. The expected resolution time is within 3-5 working days, and the risk assessment is High due to the risk of environmental degradation, water pollution, and public health issues if the grievance is not addressed promptly.
