

Government Grievance Assessment Report

Case Identification

Grievance ID: G-20230216-001

Date of submission: on or around 14 February 2026

Nature of grievance: Complaint

Category: Environmental Issues

Subcategory: Water Pollution

Priority: High

Detailed Assessment and Case Study

The grievance submitted by a citizen of Ambernath, Maharashtra, reports a severely polluted nala (stream) overflowing with various types of garbage, predominantly plastic bags, wrappers, and other discarded items. The water itself appears dark, murky, and stagnant in some areas, with visible foam and debris floating on its surface, indicative of heavy pollution. The photograph, taken from an elevated perspective, likely a bridge, looking down through a metal grate or fence, provides a stark contrast to the green vegetation visible on the far bank. The location information embedded in the image confirms the grievance details, pinpointing the issue to Ambernath, Maharashtra, India. The citizen's concern is not only about the immediate health risks posed by the polluted water and bad smell but also the long-term consequences of water pollution, including the spread of waterborne diseases and harm to aquatic life. The presence of plastic bags, wrappers, and other discarded items in the nala indicates a lack of proper waste management, and the potential consequences of water pollution can be severe. The fact that the issue is located in a residential area with nearby buildings and a metal fence/railing over the nala suggests that the impact of the grievance is localized but still significant. The responsible department, Public Works Department (PWD) or Municipal Corporation of Ambernath, needs to take immediate action to clean up the nala, prevent further pollution, and implement measures to prevent similar incidents in the future. This includes conducting public awareness campaigns to educate people about the importance of proper waste management and the consequences of littering and burning garbage. The citizen's frustration and concern about the issue are evident, and it is essential to address this grievance promptly to prevent further escalation and maintain public trust in the authorities.
